About PM Mendes

Contents

Welcome

Expert knowledge, gained through trading in wooden panel products, timber components and doors for practically 50 years, is the foundation of our business. We maintain a strong ethical tradition, meaning that we will always attempt to do what is right and not what is expedient at the time. Our policy — applied for more than 20 years, is to deal with a carefully selected range of manufacturers with proper financial backgrounds and managements who are prepared to work to our quality standards. Personal relationships and trust ensure that the quality standards are maintained and that, if by chance any defect is found, the problem will be rectified without quibble and procedures examined to see if any improvement would eliminate or reduce the risk of a repeat. Our main storage site at Corsham, Wiltshire, is located conveniently close to the M4 motorway, enabling economic access to all areas of the country. We consider that a proper delivery service operates to customers’ requirements and not to a fixed schedule of convenience principally to us. To achieve this service level we own a fleet of 7.5 tonne trucks and vans, but also make extensive use of selected carriers to deliver throughout the UK. With these facilities a delivery lead time rarely exceeds 48 hours and can frequently be managed in 24 hours if necessary.

Product Guarantee

We offer a 10 year guarantee from the date of delivery on most timber doors. Some doors have been excluded from the guarantee; exclusions include some Premdor products and our L&B and FL&B doors. PM-Mendes (International) Limited undertakes to repair or replace, at the option of the Company, products which are shown to be defective in materials or manufacturing workmanship within the warranty period. This guarantee is intended for the original purchaser only and does not extend to subsequent purchasers during the length of this guarantee. No claim will be approved until a site inspection has been carried out by an experienced member of staff at the discretion of the Company. In the event of goods proving defective (manufacturer’s defect only) which need replacement, our liability shall not exceed the price paid for the defective piece(s). This guarantee does not include associated charges such as labour for the removal, re-hanging or decoration of new or replacement piece(s) and/or any other works/service not originally supplied by PM-Mendes.

Our Products Explained

We hold a range of stock that is known to be popular to the majority of consumers and, because service is paramount, our stock is considerable. If, however, we are not showing a door that you require, please do let us know as we can probably obtain it for you. Doors in this catalogue have been separated into Internal and External categories, and then grouped into popular ranges. Inevitably the names used will differ from those used by other suppliers, but we have tried wherever possible to use the most common name to describe a door by it’s characteristics.

Internal Doors

Internal Doors

Our internal doors are manufactured to an extremely high standard, by factories that are considered to be market leaders in providing value for money without compromising product quality. The doors are manufactured using the 'preferred' engineered construction, which ensures maximum stability. The stiles are edged with a solid timber lipping and over veneered.

We now stock a range of FSC® and PEFC certified products. Products which are FSC® certified are detailed throughout the catalogue, look out for the FSC® logo on pages which have FSC® certified products.

Unless stated otherwise, internal doors are supplied unfinished.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information.

Solid Oak V Groove Detail

Oak Prefinished Range

Our oak prefinished range of doors look great in modern and traditional styles. They are a firm favourite for both houses and commercial properties without the need for decorating on site. With designs ranging from feature or solid Oak ‘V’ grooves, ash or walnut inlays, traditional panel to a simple flush veneered door. Most of our Prefinished Oak doors are available as an FD30 fire rated door and glazed options to suit.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information.

Oak Unfinished Range

Oak Unfinished Range

Our oak unfinished range will give any home a traditional or contemporary look whilst allowing you full control of the finished result, whether it's lacquer finished to enhance the natural timber grain or decorated in a painted colour of your choice. Designs ranging from contemporary flat panel shaker style, traditional flat panel with an attractive ovolo bead, raised moulded with raised & fielded panels or for a more rustic feel we have our framed, ledged & braced and ledged & braced doors. We offer FD30 rated fire-doors and glazed options in many of our unfinished oak doors design.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

Grey Prefinished Range

Grey Prefinished Range

Our grey prefinished range of doors are the latest addition to the Mendes portfolio. They have become very popular with modern living and commercial spaces. The grey Corsica has an attractive feature 'V' groove, are manufactured with a real veneer that is impregnated with colour prior to being fully finished. We also offer an FD30 rated fire-door and glazed options to suit.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

Grey Laminate Range

Grey Laminate Range

This hardwearing and sophisticated light grey door range utilises a modern laminate facing to create a 7-panel design, with glazed options also available.

This low maintenance option saves time as there is no need to finish the doors. The durable laminate finish provides the appearance of real veneer without the variations in colour.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

Walnut Prefinished Range

Walnut Prefinished Range

Our walnut prefinished range will give a stylish, warm and modern look to any home or commercial property without the need of further decoration on site. Designs from solid walnut feature ‘V’ grooves, aluminium effect inlays, to a simple flush cross directional veneered door. FD30 Fire-doors and glazed options are also available.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

White Primed Range

Our white primed range are available in both contemporary and traditional designs. They are supplied as deluxe primed – these doors only need a topcoat to be fully decorated. Available in our popular feature ‘V’ groove designs or in a flat panel shaker style. We offer a finishing service available in any painted RAL colour of your choice. FD30 Fire-doors and glazed options are also available.

The Essex door is supplied with 2 coats of factory applied white primer that allows the natural grain within the oak to show through.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

External Doors

External Doors

Our external oak and hardwood doors have a high specification engineered construction improving the performance of the finished product. Our doors have solid lippings in either oak or hardwood to compliment the door. Laminated timber stiles and rails not only offer stability against bowing and twisting but give the look and feel of a solid timber door with the added advantage of being stronger and a more stable product.

It is recommended that any of our external oak or hardwood doors must be protected from exposure to direct sun and rain. This is usually achieved by a porch, recess or overhang of a minimum of 1.5 metres. If this precaution is not observed, the performance and appearance of the door will not be satisfactory.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

Oak Door & Sidelight Range

External Doors

Modern Double Glazed and Solid Doors

Oak Door & Sidelight Range

Within our wide range of external oak doors there is sure to be a style suited for every setting. From traditional to contemporary or to something a bit more special for a grand entrance. We offer solid, glazed and unglazed single and pair doors, sidelights to compliment some styles and thermal rated doors for new building regulations. All our external oak doors come unfinished for onsite finishing.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

Softwood Range and Door Blanks

Softwood Range and Door Blanks

Basic in design and traditional in appearance — but always the first choice for outbuildings or where a more traditional door design is preferred. These competitively priced doors, which are rustic in appearance, make these doors ideal for paint finishing. L&B doors are supplied with loose pinned braces for on-site handing. They are not recommended for internal use or for use as a domestic entrance door. The FL&B doors are also supplied loose pinned for on-site handing.

Door Blanks

Our external blanks are manufactured using a lightweight solid laminated timber core and faced with a thick paint grade exterior quality plywood which is ideal for paint finishing. FD30 fire rated and lipped on all four edges, (except for size 2440 x 1220mm & 2135 x 915mm) these doors can be considerably reduced in height and width. Apertures can be cut providing the aperture size, glass and bead density are in conjunction with the manufacturer’s fire certification (please check the certificate for limitations) making these doors the ideal cheap fix for your basic exterior requirements.

N.B Please refer to care & installation guide and treatment of doors on pages 106 - 107 for additional information

team and we will get
it priced for you, with
Mendes bespoke
service you are
in control

Bespoke Door Service

Mendes Bespoke is a one-stop service for all your door requirements. With our trusted custom factories in the Far East, Spain and the UK, doors can be created to your design and finished to your exact specification.

With your ideas and our experience, we can create something special for your project.

Bespoke Door Sizes and Doorsets

Tailored door services

How can we help you?

Have you seen a door from our extensive range you like, but need a different size, finish or material? We can help, simply tell us the details.

If you've found a style you like elsewhere, that you require customizing, we can often source this for you. Unsure of what may suit your decor and need guidance - with our expertise, we will help you visualise the end result.

Please contact us to discuss your door requirements further:

If you would like to speak directly to our sales team, we would be more than happy to help.

Please call: Head Office 01225 811411
Northern Office 0151 531 1052

Alternatively email us at: bespoke@pm-mendes.co.uk

Visit us at our showroom in Corsham, near Bath.
Or download our latest brochure at:

Individually yours...

We can match most RAL colours

A wide range of veneers are available

A professional, quality, and flexible service from a well established company.

- Huge range of styles and finishes
- Unusual sizes and oversize doors a speciality
- Part M mobility and fire rated options available
- Pre-hung door sets

Combine your choice of Glazing, inlays, grooves and finishes that will ensure you achieve the custom look your project requires.

Optional finishes include:

- Veneers
- Inlays - metallic & timber
- Grooves
- Lacquer - various matt to high gloss sheens
- Glazing
- Ironmongery

Door Frames and Mouldings

Door Frames and Mouldings

Internal Door Linings and Mouldings
our internal oak door linings, architrave and skirting are of high quality, constructed with a timber core and over veneered with real oak.
Our door linings are suitable for max door size of 2050x1000x45mm. Our door linings and mouldings come in kit form which is indicated on the opposite page. If a door lining or architrave is required for a double opening 2 kits of each would be required.

External Frames and Mouldings
Our external oak frames and weather bars are manufactured from solid laminated oak, over veneered with oak. The frame kits therefore combine the visual features of oak with the added strength and stability an engineered product is able to offer. Our frames come in kit form and the lengths supplied in a single frame set can be cut to suit all single doors to a maximum size of 2150x950mm. The frames are reversible to suit both inward and outward opening doors. The frames are supplied unfinished and must be fully treated with a suitable quality external wood finishing product to guarantee performance. A separate mullion is available if fitting doors and sidelights.

Our external hardwood frames and mouldings are of solid laminated timber construction which is designed to give extra stability. The frame sets are supplied un-assembled and unfinished with a reversible cill for both inward and outward opening and a plastic water bar is included in the kit to fit in the groove on the cill. Frames are also grooved to accept a weather strip which can be purchased separately.

Internal Door Linings and Mouldings

Oak Modern Profile Door Lining White Primed Square Profile Door Lining

Product	Kit Components	Width (mm)	Thickness (mm)

Space Saver Door Systems

Space Saver Door Systems

Space savers have become more popular over the years and are a simple way to increase available space in most domestic properties, particularly dining rooms, en-suite bathrooms, cloakrooms and doors into kitchens. They are also practical for most commercial buildings and outdoor use. We show a few systems within our brochure but there are many other space saving systems available upon request, for more details please contact our sales team who will be happy to help you.

Internal Door Kits

Internal Door Kits

Our internal door kits are suitable for any of our internal doors. These kits are supplied with a white primed MDF lining, with hinges and machined for a latch, bathroom lock or sash lock. These are supplied as a flat pack system, for easy assembly on site and colours to suit your home.

We can supply these in 35mm, 40mm, 44mm Firedoor, glazed or solid in a full range of sizes – available for single doors and pairs.

Architrave is not supplied as standard, this is available as an optional extra.

Door Sizes

610 x 1981
(with frame = 670 x 2030mm)

686 x 1981
(with frame = 745 x 2030mm)

762 x 1981
(with frame = 820 x 2030mm)

838 x 1981
(with frame = 900 x 2030mm)

Frame Depths

100mm
125mm
150mm

Other sizes available on request

Additional Door Servicing Options

Additional Door Servicing Options

Internal door finishing

- Save time and site cost with pre-finished doors.
- Lacquering, priming and paint options available—call the sales team for further information.
- Professional high quality spray finish applied.
- Cut outs or trimmed areas will need to be painted after installation to ensure the product is fully sealed.

Aperture cutting and glazing

- An affordable way to machine and glaze apertures of your choice.
- Standard aperture option diagrams can be found on page 109.
- Bespoke aperture cutting and glazing available on most products.
- Clear, obscure, wired and fire rated glass options available.

Supply and fit intumescent seals to FD30 rated doors

- Standard intumescent and combined smoke seal available in various widths.
- Saves time, cost and risk of damages on-site.
- Ensures the correct seal is accurately fitted in line with the product fire certification.

Rebating 12mm to form a pair

- A cost effective way to accurately machine rebates.
- 12mm rebating available on most standard 35mm and some 44mm FD30 door options.
- FD30 rebating includes the correct intumescent strips to rebated meeting stiles.
- Right or left hand push or pull available—please specify when ordering.
- Remember—adding a 12mm rebate to your pair will reduce the overall width by 12mm.

Internal Door-Sets & Screen Options

SpeedSet Plus & Sound Secure Door-Sets

- Adjustable door set overcoming the problem of variation within a given wall thickness.
- SpeedSet Plus is a cost effective way of fitting a door and frame.
- Rapid installation: door-sets can be installed in less than 20 minutes.
- Door supplied pre-hung with CE marked latch and hinges as standard.
- Available with Premdor's standard core, semi solid, safe 'n' sound and FD30 fire doors.
- Damage risk is reduced as SpeedSet Plus is fitted later in the building programme.

Sound Secure Entrance Doorset

- Specifically developed to meet the complex performance demands of apartment entrance locations.
- Sound Secure FD30 and FD60 door sets meet the requirements of all current legislation and more.
- Secured By Design as standard.
- FD30 version is supplied with a paint grade softwood frame or fully finished white Winkhauser Ecoframe.
- FD60 version available on veneer styles only. Supplied in a paint grade hardwood frame.
- Several Premdor door options available for this competitively priced door set.

Alternative Door-Sets & Screen Options

Pre-hung and fully certified Door sets

- Pre-hung door sets are available in choice of veneers, laminates and fire ratings with matching architrave.
- Doors can be supplied with a wide range of standard or bespoke glazed or unglazed vision panels.
- Available with sound reducing door core specification up to 42 DB (non-fire).
- Secured By Design approved options available.
- Many widths and heights available including non standard.
- Various lock options available.
- Attractive apartment entrance door sets can also be compliant with mobility regulations.

Rebating 12mm to form a pair

- This range of screens can be offered from our standard design or bespoke to your requirements.
- Produced to either match or contrast your doors or door sets depending on your design intent.
- Sidelights, fanlights or borrowed lights are all available in conjunction with standard door set lead-times.
- Screens can be supplied in varying timbers although glazing certification will prevail should fire ratings be requested.
- Available finishes include paint grade, veneered or moulded skin.

Timber Casement Windows

Performance Timber Windows and Doors

Windows

As all properties are different, we offer two ranges of timber casement windows with a wide variety of design and performance features to suit your needs.

All of these casements are made-to-measure, meticulously crafted, and easily exceed the latest British and European safety and performance standards. Whether you are looking for traditional styling, exceptional weather resistance, high thermal efficiency, or enhanced security, we know we can supply just the right casements for your home and your lifestyle.

These casement windows are available as Flush or Stormproof casements and can be either internally or externally beaded.

Flush Casements

These popular Timber Flush casements have a classic beauty and simplicity that enhances modern homes whilst also complementing older traditional and heritage properties.

Made-to-measure from sustainably sourced softwood timber, the flush design has a hand crafted, sleek look with decorative internal mouldings, internal or external beading, and a choice of glazing bars and traditional hardware.

Immensely practical and versatile, these outward opening casements can be side hung or top hung and offer a choice of hinges for multi-compartment frames and three operating modes, including fully reversible opening to allow for easy cleaning.

Storm Casements

Timber Storm casement windows are extremely strong and stylish, providing outstanding levels of energy efficiency, acoustic performance, and security credentials.

Designed to withstand the harshest weather conditions, they are made from durable, sustainably sourced timber from Scandinavia, featuring high-performance glazing as standard. Available in both top hung and side hung configurations, they combine practicality with a high level of craftsmanship that can be customised with either internal or external beading, decorative internal mouldings on the sash, frame, and glazing bars for a touch of elegance.

Timber Entrance Doors

Doors

These timber entrance doors combine traditional beauty and elegance with the stability and reliability of solid engineered wood.

As attractive entrance doors can make such an amazing difference to the character and kerb appeal of a home, we offer a wide variety of styles and panel configurations to suit every taste.

These range from traditional two, four and six panelled options, through to more contemporary looking one panel designs – all made to measure and available in a wide range of popular colours. These timber entrance doors are made from strong knot-free engineered wood, factory finished with a protective coating system, so you can rely on their strength and durability, which will give long lasting security and protection to your home.

For additional reassurance, they are tested to both PAS24 and “Secured By Design” standards.

Performance Timber Windows and Doors

Timber Composite Entrance Doors

Manufactured using state of the art CNC equipment, these composite doors are made from a timber frame and a single leaf, reinforced with layers of engineered timber, insulated with polystyrene rigid foam, and reinforced with aluminium to give excellent stability and energy efficiency.

With their enhanced strength and durability, these immensely practical doors will help give your home long lasting protection - meeting both PAS24 and “Secured by Design” standards.

Designed with beauty and craftsmanship this composite range is made-to-measure with a wide range of styles, glazing options, and colours to suit your home.

As attractive entrance doors can make such an amazing difference to the character and kerb appeal of a home, we offer a wide variety of styles and panel configurations to suit every taste.

These range from traditional two, three and six panelled options, through to more contemporary looking one panel designs - all made to measure and available in a wide range of popular colours.

These timber entrance doors are made from strong knot-free engineered wood, factory finished with a protective coating system, so you can rely on their strength and durability, which will give long lasting security and protection to your home.

For additional reassurance, they are tested to both PAS24 and “Secured By Design” standards.

There is a wide range of standard designs with fully bespoke/ customisable options:

- Solid Timber throughout the range
- Single or double leaf configurations available
- Open in or out options

Technical Benefits

- Broad and flexible core range, with bespoke possibilities.
- Low U values resulting in thermal performance benefits.
- PAS24 compliance as standard.
- Timber composite leaf, solid timber frame.
- Ironmongery style and layout options.

Premdor Internal Range

Premdor Internal Range

Portfolio Range

Mendes are one of the UK’s leading distributors of Premdor products and are therefore able to offer the complete range of doors listed in the Premdor catalogue. Please contact our sales team even if the Premdor product you require is not shown on the following pages.

Premdor Portfolio range incorporates cutting edge Veneer Match technology which creates engineered real veneers with consistent grain and colour, offering a unique and stunning finish for a multitude of environments. Supplied with PEFC chain of custody as standard and offering a Solid core, 30 & 60 minute fire option. Glazed options are also available on request; please call our sales team for more information on

Environmental Pledge

Environmental Pledge

FSC® and PEFC Certified chain of custody timber door supplier

PM-Mendes has successfully gained certification by the Forest Stewardship Council® (FSC®) and the Program for the Endorsement of Forest Certification (PEFC). This certification provides assurances that all the timber sourced for the manufacturing process of our forever growing range of FSC® and PEFC certified products, is from sustainable, legal and traceable sources. We currently hold FSC® and PEFC certified products in stock and as the demand for FSC® and PEFC certified products increase, so too will our stock holding. We are continuously working towards increasing and introducing new certified product ranges. Chain of Custody (CoC) certification is the process by which certified material can be traced from the forest to the consumer. It provides proof that the product being sold is linked to legally managed and certified products. This unbroken chain offers transparent proof that materials have been responsibly sourced. We have also taken the necessary steps to ensure we comply with the European Timber Regulation (EUTR) which means that all timber based products used in the manufacturing process of our products is legally sourced.

Environmental Pledge

PM-Mendes has invested in facilities to segregate and re-cycle our waste and endeavour to purchase so called green options wherever possible. Our customers can be assured that any product purchased from us has made minimal contribution to the problem of global warming.

TIMBER IS A NATURAL MATERIAL AND SOME VARIATION IN THE COLOUR, GRAIN AND TEXTURE CAN OCCUR. IT IS THEREFORE OF UTMOST IMPORTANCE THAT QUESTIONS ARE RAISED PRIOR TO COMMENCEMENT OF ANY WORK OR MODIFICATIONS TO ANY TIMBER PRODUCT - NOT AFTER THE PRODUCT HAS BEEN INSTALLED. REMEMBER, ANY WORK CARRIED OUT ON YOUR PRODUCT CONSTITUTES ACCEPTANCE AND RETURNS WILL NOT BE ACCEPTED.

Preparing your timber product for Installation

Uneven expansion or contraction of component parts within a timber product is the most common reason for it to ‘fail’ or not perform satisfactorily. These movements are caused by a change in moisture level within the product and to protect against this, the timber must be fully sealed before installation as detailed in the finishing sections below. In addition please be aware of the following:

- 1. If a door needs to be trimmed it must be reduced equally from both sides. Each side of a door may be trimmed up to a maximum of 6mm for doors with a lipping 10mm or more, and 3mm for doors with a 6mm lipping. Further reductions may be possible on non fire-rated doors but please remember that this may result in exposing the engineered core which will then need to be sealed or re-lipped.
- 2. Taking more than we recommend off will invalidate the guarantee.
- 2. Avoid cutting / fitting locks or latches at a rail or glazing bar joint as this will cause weakening of the door.
- 3. We recommend the use of 3 hinges to offer more rigidity and strength.
- 4. FD30 fire rated doors must be installed in accordance with the relevant fire certificate – it is the responsibility of the person fitting the door to ensure that the intumescent strips or seals are fitted in door, frame or lining as stipulated.

Finishing & Sealing

- 1. Untreated products must be fully sealed prior to hanging – this applies to all surfaces including tops, bottoms and all recesses cut for hinges, locks, handles and letter plates etc. Waxes and oils such as Yacht varnish, Osmo Oil and Danish Oil are not considered suitable for sealing our timber products and if used will invalidate any guarantee should the timber product subsequently fail.
- 2. Please do not use a water based sealant as if applied too liberally it may penetrate the veneer and may cause bubbling to occur.
- 3. Pre finished products must be re-sealed as above in areas where timber has been exposed during alterations. White primed products should be sealed with a final top coat with particular attention paid to any areas where the priming has been removed.
- 4. To obtain the best finish lightly sand, de-nib and wipe clean all surfaces before initial sealing and before final coat is applied.
- 5. It is recommended that, when using a finishing system, the same manufacturer/brand is used for all coats. Mixing products can lead to reactions and won’t fully seal the door/frame. Doing so will invalidate the guarantee.

External Products - Additional Information

Our engineered external timber products must be protected from direct sun and rain. This is achieved by a porch, canopy or recess of ideally 1.5 metres. If this precaution is not observed the performance of the timber product will not be satisfactory and any guarantee will be surrendered.

Please note that we also cannot guarantee timber doors (both internal & external) if fitted in a location where there is a lot of heat/sunlight i.e. a glass porch. These types of locations create a greenhouse effect and puts timber doors under extreme pressure. This can cause shrinking and/or cracking.

In addition to finishing and sealing as above please be aware of the following.

- 1. We recommend a minimum of 3 coats of a suitable finishing product be applied to fully seal a door or frame.
- 2. We recommend the fitting (externally) of a weather bar at the bottom of the door.
- 3. Try to avoid painting any external timber product black (or very dark) as dark colours absorb heat making the product very hot which can lead to cracking or excessive shrinkage.
- 4. With external oak timber products please ensure that the sealant contains a UV protection element.

WARNING - If what you are applying is clear it will probably not contain UV protection.

Check with your finishing supplier before purchasing. Our external engineered doors are not suitable in coastal locations

Future Maintenance

With external timber products it is impossible to advise how long the applied finish will offer protection. Much depends on the finishing product used, the facing of the timber (N, S, E or W), and how forcefully a door is opened and closed. The general rule is to ensure the product remains sealed, preventing moisture movement. If lacquer becomes cracked, scuffed or scratched, re-seal the offending part of the timber product immediately. If shrinkage lines appear around panels re-seal exposed timber immediately. Sealant around external glazing apertures can become brittle and crack if subjected to periods of high temperature; if this becomes evident re-seal with suitable clear waterproof mastic for external use. Finally, we recommend that you wash the timber product with warm water and detergent at minimum every two years, and apply a further coat of finish.

Storage & Handling

- 1. Store flat on 3 cross bearers longer than width of door, or on the pallet on which they were supplied, in a dry well-ventilated area.
- 2. Do not store in following locations: - next to a working radiator, in a room where “wet” trades are present, in direct sunlight.
- 3. Lifting door from stack – do not drag as this will cause face damage. It is recommended to use a second person when moving a door.

oiling do not properly seal and are not recommended. It is also not recommended to use a waterbased system on our timber products.

- 1. All our timber products must be correctly treated without delay and prior fitting. It is most important that all timber products are completely and fully treated before fitting, including all faces, edges and any ‘cut outs’ such as letter boxes, locks etc. It is vital that the ‘end’ grain is completely protected as this is where moisture can most easily penetrate causing swelling, splitting and warping.
- 2. If the door requires trimming to fit, it should be reduced in size equally from both sides when fitting. Mortice locks fitted at rail joints can result in removal of one or more dowels or cause serious damage to a mortice, so weakening the joint. Mortice lock cavity should be kept to a minimum size and not fitted at a rail joint.
- 3. Usually 3 coats of a proprietary branded finish should be satisfactory but you should treat the door in accordance with instruction of the manufacturer of your chosen finish. Please note that waxing and/or

- 4. As timber is a naturally grown product subject to change due to variations of humidity and temperature, we try to ensure that the timber has been prepared to make it suitable. It is obvious that we cannot know all the circumstances surrounding every situation in which our products are stored and installed, and we therefore cannot give any guarantee against shrinkage, warping or splitting.
- 5. All external timber products but particularly oak, must be protected from exposure to direct sun and rain. This is usually achieved by a porch, recess or overhang of a minimum of 1.5 metres. If this precaution is not observed, the performance and appearance of the door will not be satisfactory. Our external engineered doors are not suitable for coastal locations.
- 6. Regular maintenance of our timber products should be observed to prevent breakdown of paint film and to protect the fibre from deterioration. Please remember—the ‘finishing’ seals timber and prevents moisture movement, the main cause of swelling and shrinkage resulting in splitting and bowing. If the ‘finish’ is not complete, or breaks down due to poor maintenance, the timber product performance will deteriorate.

Height & Width Size Conversion Chart

	Metric (mm)	Imperial (feet & inches)	Imperial (inches)
Single Door Sizes	1981 x 457	6'6" x 1'6"	78" x 18"

Glossary Definition of Terms

Architrave: A decorative moulding that surrounds the door and covers the gap between the frame and the wall.

Aperture: An opening that is cut out of a door and fitted with glass.

Beading: The timber moulding which is used to fix glass into an aperture or used as a decorative finish that surrounds a panel of a solid door.

Bespoke: Doors that have been specially made to suit individual requirements. Customers can request special designs and sizes to match specific needs.

Bi-Fold: Doors which fold in half when opened and are fitted onto a track system. This type of product is particularly suitable for smaller spaces or if fitted as a pair, can be used as a room divider.

Core Construction: Are the materials of the internal ‘make up’ of a door.

Door Pairs: This is two doors which are fitted directly alongside each other in a double sized opening. Pairs can be rebated by 12mm to allow the doors to interlock when closed.

FD30: Products which have been tested and certified to withstand a passage of fire for more than 30 minutes.

FD60: Products which have been tested and certified to withstand a passage of fire for more than 60 minutes.

Finish: Refers to the final coat of paint or lacquer which is used to decorate a product. Doors can be supplied un-finished for on-site decoration or a specific paint/lacquer can be requested to suit individual requirements.

Flat Panel: The panel on a door which is completely flat and not raised or profiled.

Frame: The timber that covers an opening in the wall that the door is then fitted to. They are also often referred to as linings or casings.

FSC®: The Forest Stewardship Council is a globally recognised independent organisation that promotes forest management. FSC® Certified products offer reassurance to customers that the timbers used in the construction of the doors is from a sustainable, legal and traceable source.

Handle Packs: These are ironmongery sets which contain everything you need to fit your door, including handles, hinges and latch/lock mechanism.

Handing: This term is used when discussing pairs of doors. It refers to which door leaf will open or close first i.e. RHPO normally means ‘right hand push open’ and LHPO is used for ‘left hand push open’.

Inlay: A decorative strip of veneer which is normally different in colour to the face veneer. The Inlay is a design feature which is flush with the face veneer and normally in the form of vertical or horizontal lines.

Insert: Like an inlay, but this is normally a material which can be inserted into a groove after a door has been fully finished. Inserts are not always flush with the face veneer.

Light: This refers to a single pane of glass within a door e.g. a ‘4-light’ door has 4 panes of glass (or 1 pane with a glazing bead cassette giving the door a 4-light ‘look’).

Linings/Casings: Otherwise known as an internal door frame.

Lippings: These are the door edges and if they are thick enough, they can be trimmed to enable your door to fit a specific sized opening, without exposing the inner core of the door (FD30 rated doors have limitations – please check the fire certification). Lipping’s are also often rebated to allow a pair of doors to overlap at their meeting point.

Mullion: This is a double rebated jamb (frame upright/leg) which is required when fitting an external door with a sidelight.

Pair Maker: A timber moulding fitted to a door edge to create a door pair (instead of a rebate).

Pocket Door System: A sliding door system that is built into a wall cavity to allow the door to disappear completely once opened. A popular, modern door solution that is ideal for properties with limited space.

Pre-Finished: Doors that are supplied which have already had a paint or lacquer finish applied.

Primed: Doors that have been prepared with an undercoat ready for a top coat finish.

Rebating: This allows the doors to close together as a pair; - by machining a groove (rebate) into the long edges of two doors which creates an overlap where the doors meet.

Safety Glass: Glass that has been manufactured so that; - if it breaks, it will ‘shatter’ and will not leave long dangerous sharp shards.

Semi-Solid Core: The internal core of the door is part solid and part cellular components.

Sidelight: A panel/door which is usually fixed in position alongside a standard hinged door. A sidelight is normally used to fill a gap and allow more light to enter the room.

Solid Core: The Internal core of the door is manufactured using solid timber or particleboard.

Standard Core: The internal core of the door has cellular components. This makes the door lighter in weight than the solid or semi-solid core doors and are suitable for domestic use.

Stile: This refers to the side of the door. Specific terms are hanging stile (Hinge side), leading stile (Side which opens into a room) and meeting stile (Door pairs – rebated meeting stiles).

Unfinished: Doors that have no paint, undercoat or lacquer applied and are bare wood ready for preparation, undercoat and a top coat.

Veneer: A thin piece of timber used as a decorative material on the visible face of the door (i.e. Oak, Ash, Walnut etc.).

General

All orders must be confirmed in writing by the customer either by fax, post or email. Our sales contract is between the persons or customer detailed on the sales order acknowledgement and not with third party persons or customers. We shall not be held responsible for any incidental work or expenses arising out of or because of any defect in our products, or for bad workmanship. In the event of goods proving defective (manufacture defect) which need replacement, our liability shall not exceed the price paid for the defective piece(s).

Pricing

Prices quoted in our pricelist, or any other literature issued by us, are subject to alteration without notice. Unless otherwise agreed in a letter, email or facsimile by us, goods will be invoiced at prices applicable at the date of despatch. All prices are subject to VAT and this will be charged at the standard rate applying at date of despatch.

Lead -Time

Delivery lead-times quoted or advised are an estimate and should only be used as a guide. Carpenters or Joiners should not be booked until the products have arrived on-site or to the intended delivery address. We shall not be held responsible for any expenses arising due to failed deliveries within the estimated time frame. Items not normally stocked by us will be regarded as ‘specials’ or ‘to order’, which are not returnable and non-refundable. We will use our best endeavours to affect any alterations required subsequent to placing of order, but reserve the right to invoice for full payment of the original specification. Any deposit paid with order is only refundable at our discretion.

Cancellations

Any products that have been manufactured or non stock items which have arrived at the time of cancellation will be charged at the full quoted price at our discretion. Where the Company accepts orders for ‘special’ or ‘to order’ products the Company will endeavour to fulfil your requirements, but if it proves uneconomical or impractical to supply your complete order, the Company reserves the right to cancel the Contract or the remaining products outstanding. The Customer is therefore only liable to pay for the delivered products.

Delivery

All goods shall be unloaded promptly at the delivery point. Any costs arising as a result of delay to transport or for goods damaged whilst unloading will be for the account of the Purchaser. No claims for damaged or defective goods will be met unless reported at least provisionally within three working days from the date of receipt, and reported in detail within seven working days. Edge or corner damage and shortages should be noted on the Despatch Note at time of receipt. Pallets and packaging are used to protect your order from damage. This packaging forms part of your order and is not to be returned on the delivery vehicle unless prior agreement has been arranged. Returning of empty pallets or packaging on the delivering vehicle may result in charges made to the original purchaser.

Returns

Returns and refunds may be accepted at the discretion of the company. Returns due to a customer order error or cancellation will be subject to our standard restocking/handling charge of 30% of the purchase price, and products must be returned in a perfect resaleable condition. If customers are unable to arrange the return of unwanted products, a collection charge will be applicable. ‘Specials’ and standard non stocked items will not be accepted for return. Credits will be issued after a full inspection has been carried out on the return of the product. Any returned products which are not in the original packaging and in a perfect resaleable condition will not be credited or returned to the customer.

Payments

Payment is required in full in accordance with the terms agreed at the time of opening a credit account, or with the terms stated on our Order Acknowledgement. No variation to these terms will be permitted unless specifically acknowledged in writing by us. We reserve the right to charge interest on any overdue invoices. Interest will be charged at the rate of 8% per annum over the prevailing Base Rate of HSBC Bank plc. Title of goods under these Terms & Conditions will not pass to the Purchaser until all outstanding amounts have been settled and payment has been received in full by us or by such persons as may be designated by us at the time of invoicing. Should the Purchaser sell the goods in such a way as to pass valid title to a third party, the Purchaser shall hold the proceeds of such a sale in trust for us. Notwithstanding that title to the goods shall not pass except as provided above, the goods shall be at risk of the Purchaser from the time of their collection or on delivery to an agreed destination.

Disclaimer

Whilst every effort has been made to replicate the colour of our products in this catalogue, due to printing processes, product colour cannot be matched 100%.
